Fiat 2,2l Multijet3 180 (132 kW/180 HP)	–	5.890,–	5.890,–	2.990,–

We charge a standard fee of 1.590,– for preliminary freight, freight, TÜV, certificate of title and gas test in Germany.

All prices in Euro, valid for the German market. All prices include statutory VAT at the rate of 19% applicable in Germany and are subject to changes in the tax rate.

Important note: The seller is legally obliged to apply the VAT rate valid at the time of vehicle delivery (= service provision) to the purchase price. Changes in the VAT rate between the conclusion of the purchase contract and delivery of the vehicle therefore lead to a change in the VAT amount owed by the purchaser and to this extent to a subsequent change in the agreed gross purchase price.

IMPORTANT NOTES ON THE WEIGHTS

Important technical and legal information on vehicle configuration and weight-related information

Every vehicle in public road traffic is only approved for a certain maximum weight. This maximum don't have to be exceeded under any circumstances when driving. Therefore, when configuring your vehicle and selecting additional equipment ("packages" and "options") from our range, the technical and legal requirements for the weight of your vehicle must be particularly observed.

Commission Implementing Regulation (EU) 2021/535 of 31 March 2021 (until 06/2022: Commission Regulation (EU) No. 1230/2012 of 12 December 2012) contains the legal requirements for the weight of your vehicle. The following explanations and information from EuroCaravanning GmbH & Co. KG are based on this regulation in order to inform you as comprehensively as possible about the weight-related information listed within the scope of the configuration. Please read the following explanations and notes on weight-related information carefully before configuring and ordering your vehicle. Our trade partners will be happy to assist you with the selection and configuration of your vehicle.

I. TERMINOLOGY

1. Maximum authorised laden mass

The "maximum authorised laden mass" of the vehicle is entered in the registration certificate part I, more precisely under point F.1. With this information, the manufacturer indicates the maximum weight that your vehicle may weigh when loaded (e.g. 3.500 kg). It is not permitted to exceed this weight limit while driving, as this is punishable by fines in many European countries.

In Germany, exceeding the maximum authorised laden mass can be punished as an administrative offence with a fine. We recommend that you weigh your vehicle before each journey and ensure that the maximum authorised laden mass is not exceeded. It is the responsibility of the vehicle owner to ensure compliance with the maximum authorised laden mass. In the technical data, the maximum authorised laden mass is stated for each floor plan.

2. Mass in running order

"Mass in running order" means the mass of the vehicle with bodywork and standard factory equipment ("basic equipment" or "standard equipment"), including the fuel tank filled to 90 % of its capacity and operating fluids such as greases, oils and coolants, 100 % full gas cylinders, tools and tyre puncture assistance, plus the driver's mass calculated at a flat rate of 75 kg.

In the technical data, the "mass in running order" is given for each floor plan. The following items are included in the mass in running order:

- the unladen weight of the vehicle including the bodywork, including operating fluids such as greases, oils and coolants, tools and tyre puncture assistance;
- the factory standard equipment; i.e. the basic configuration of a vehicle equipped with all the features required by law, including any fitted equipment that does not require any further specifications at the configuration or equipment level;
- the fresh water tank filled to 100% in driving mode (The capacity of the fresh water tank in the VANTourer is limited to 20 litres in driving mode.) and an aluminium gas bottle filled to 100 % with a weight of 8 kg;
- the fuel tank filled to 90 % including fuel;
- the driver, whose weight is calculated at a flat rate of 75 kg.

Please note that the "mass in running order" figures in the technical data are calculated nominal values which are subject to production-related tolerances of up to ± 5%. These legally permissible tolerances can have a direct effect on the actual mass of your vehicle and thus also on the payload or remaining payload. It is therefore highly advisable to take these tolerances into account when configuring your vehicle.

3. The actual vehicle mass

The "actual vehicle mass" refers to the mass of the vehicle in running order, including the mass of factory-fitted optional equipment specifically configured for a particular vehicle.

4. The mass of the driver and the passengers

The "mass of the driver" is calculated as a flat rate of 75 kg – regardless of the actual weight of the driver – and is already included in the mass in running order. Therefore, it is not taken into account when calculating the mass of the authorised passengers.

The "mass of passengers" is also calculated as a flat rate of 75 kg per passenger – regardless of their actual weight. For example, the "mass of passengers" for a vehicle with a 4 passenger registration when driving is 225 kg in total (3x 75 kg).

In the technical data, the permissible number of persons in driving mode is specified for each floor plan.

The "mass of passengers" results from the permissible number of persons in driving operation as determined by the manufacturer in the type-approval procedure minus the mass of the driver calculated as a lump sum of 75 kg.

5. Standard equipment and optional extras

"Standard equipment", also known as "basic equipment", includes the basic configuration of a vehicle with all legally required features, including all attached equipment that does not require any further specifications at the configuration or equipment level.

For the floor plan you have chosen, you will receive the details of the standard equipment ("basic equipment") as part of the configuration below.

Additional equipment ("Packages" and "Options") refers to all equipment which is not included in the standard equipment and which can be fitted to the vehicle at the factory under the responsibility of the manufacturer, on customer order. In this sense, other accessories installed by you or your trade partner after the vehicle has been delivered by the manufacturer are not additional equipment.

Please note that the installation of additional equipment may reduce the payload (cf. item 6.). Information on the maximum mass of additional equipment that can be selected for each floor plan can be found in the information on the respective vehicle floor plan (cf. item 7.).

6. The payload and the minimum payload

To calculate the "payload" of a motorhome, the mass in running order, the mass of the passengers and the maximum mass of the additional equipment specified by the manufacturer must be subtracted from the maximum authorised laden mass. The remaining mass is the payload.

For motorhomes, there is a fixed "minimum payload" in European legislation that must be available for luggage and other accessories not installed by the manufacturer. This must not be undercut when configuring the vehicle and is calculated using the following formula:

Minimum payload in kg ≥ 10 * (n + L)

Where "n" is the maximum number of passengers plus the driver and "L" is the total length of the vehicle in metres, with two decimal digits.

7. The maximum mass of the additional equipment

To ensure that the minimum payload required by law is met, each manufacturer specifies the "maximum mass of additional equipment" for each floor plan. This is the mass available for the selection of factory additional special equipment such as "options" or "packages", taking into account the legally prescribed minimum payload.

EuroCaravanning GmbH & Co. KG calculates the maximum mass of the additional equipment by subtracting the mass in running order, the mass of the passengers and the minimum payload from the maximum authorised laden mass. Example:

If the maximum authorised laden mass of a motorhome is 3.500 kg, the mass in running order is 2.968 kg, the mass of the passengers is 3x 75 kg and the minimum payload is 110 kg, a maximum remaining load of 197 kg remains.

VANTOURER PACKAGES **FIAT**

II. TECHNICAL AND LEGAL INFORMATION

1. Legally permissible tolerances in the calculation of weight data

The values given in the technical data for the mass in running order are calculated nominal values which are subject to production-related tolerances of up to $\pm 5\%$. These production-related tolerances are permitted by law and result from the use of natural materials such as wood and the manufacturing processes of some suppliers. Although production processes are optimised, weight variations due to the materials used cannot be completely excluded. As these tolerances have a direct impact on the actual mass of your vehicle and therefore also on the possible payload or remaining payload, it is essential that you take them into account when configuring your vehicle.

An example for clarification: If the mass in running order is 2.968 kg according to the technical data, it is subject to a legally permissible tolerance of $\pm 5\%$, which corresponds to a deviation of 148 kg. This results in a legally permissible range of the mass in running order of 2.820 to 3.116 kg.

2. Effect of the legally permissible tolerances

If the actual vehicle mass is increased by the selection of additional equipment in such a way that there is no longer sufficient load capacity for the permitted passengers and the minimum payload between the maximum authorised laden mass and the actual vehicle mass, you have the option of selecting a vehicle load increase (depending on the floor plan), reducing seats or deselecting additional equipment as part of the configuration. Otherwise, the configuration and ordering of the vehicle cannot be continued.

It is important to ensure – if necessary with your EuroCaravanning trade partner – that the maximum authorised laden mass is not exceeded, even mathematically, in order to ensure sufficient payload possibilities for passengers and luggage.

Observe – irrespective of compliance with the minimum payload – in your configuration the legally permissible production-related tolerances for the mass in running order, as these always also affect the payload possibilities. You can only order one maximum mass of additional equipment for each floor plan.

If the vehicle from the above example is ordered with additional equipment weighing 150 kg and a stated nominal mass in running order of 2.968 kg, this results in a payload of 180 kg. However, the actual payload possibility may differ due to the legally permissible tolerances. If the mass in running order of your vehicle is permissibly 1% higher than the stated nominal value, the payload possibility is reduced from 180 kg to 151 kg.

Example:

3.500 kg	Maximum authorised laden mass
- 2.998 kg	Actual weight of the vehicle in running order (+ 1% compared to the mass in running order of 2,968 kg stated in the technical data)
- 3 x 75 kg	Mass of the passengers
- 150 kg	Additional equipment ordered for the specifically configured vehicle
= 127 kg	Remaining payload capacity (Important: The remaining payload capacity must be greater than the minimum payload, cf. point 6).

It is recommended that you weigh your loaded vehicle before starting each journey and ensure that the maximum authorised laden mass is observed. As the driver of the vehicle, it is your responsibility to carry out this check.

III. MISCELLANEOUS

Subject to changes, errors, factory technical adjustments and printing errors. The content corresponds to the status at the time of printing in August 2024. The price list is valid from 01.08.2024 for the model year 2025. Previous price lists lose their validity. All prices are in euros and include the statutory value-added tax currently applicable in Germany. Prices are valid for the German market and are subject to adjustment in the event of tax rate changes. Some of the illustrations in the VANTourer price list show optional extras that are available at extra cost. We reserve the right to make errors and misprints.

VANTourer panel vans from EuroCaravanning have a 5 year leakproof guarantee and a 24 month warranty. Dimensions and weights are within possible tolerances of $\pm 5\%$ due to the use of natural raw materials. By adding, modifying or installing parts in unauthorised workshops, you endanger your safety and risk the loss of the general operating permit and the VANTourer warranty. Therefore, only have repairs or retrofits carried out by an authorised VANTourer dealer and insist on original VANTourer extras. Subsequent conversions and installations, as far as they are technically possible, require additional assembly and material costs. In individual cases, special request combinations may be mutually excluded. We reserve the right to make technical changes in design, colour and equipment, insofar as this serves technical progress.

Non-binding price recommendation of the manufacturer		
	550 D	600 D
Ford 2.0l EcoBlue Light Duty (96 kW/130 HP)	61.390,-	63.790,-
Surcharges for motorization		
Ford 2.0l EcoBlue Light Duty (121 kW/165 HP)	1.690,-	1.690,-

We charge a standard fee of 1.590,- for preliminary freight, freight, TÜV, certificate of title and gas test in Germany. All prices in Euro, valid for the German market. All prices include statutory VAT at the rate of 19 % applicable in Germany and are subject to changes in the tax rate.

Important note: The seller is legally obliged to apply the VAT rate valid at the time of vehicle delivery (= service provision) to the purchase price. Changes in the VAT rate between the conclusion of the purchase contract and delivery of the vehicle therefore lead to a change in the VAT amount owed by the purchaser and to this extent to a subsequent change in the agreed gross purchase price.
